

## SWM LCR G1.02 DRAINAGE TERMINATION OPTIONS

STANDARD WATERMASTER LCR SYSTEM  
OPTIMUM WATERMASTER LCR SYSTEM

- NOTES:
1. Water-Resistive barriers must be continuous over the entire project.
  2. Water-Resistive barriers must be lapped shingle wise or counter-flashed to other watertight construction or bonded watertight adjoining watertight construction.
  3. Flashing may be omitted at foundation terminations where the system and water -resistive barrier lap over the foundation. Lap shall be sufficient to prevent water intrusion.

Disclaimer: The design, specifications, and construction shall comply with all local building codes and standards. Parex USA installation guidelines are for general information and guidance only and Parex USA specifically disclaims any liability for the use of this design, and for design, engineering, or workmanship of any project. The assembly shall be designed to prevent condensation within the assembly. The designer and the user shall provide final drawings and specifications. Products shown other than those manufactured by Parex USA are shown for clarity of the Parex USA product only. Contact the manufacturer of such other products for installation instructions.
